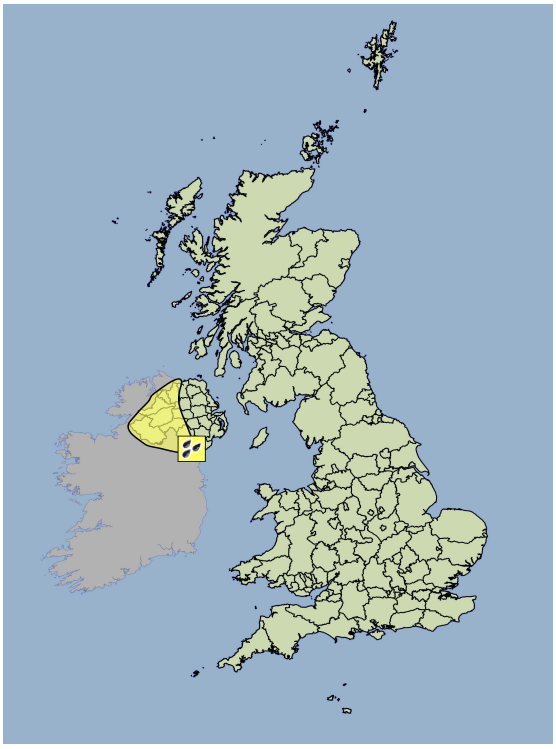
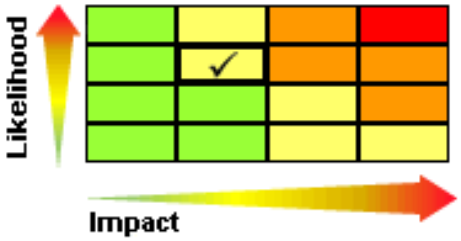
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system will run into the UK from the west on Wednesday, bringing further rainfall and strong winds. This will sink southeastwards across Northern Ireland, clearing early evening. The total rainfall from this event will be around 10-20 mm, much lower than previous days, but will cause some localised impacts given the saturated ground conditions.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **13:00 on Wed, 09th Dec 2015** until **19:00 on Wed, 09th Dec 2015**

Another area of rain is expected to cross Northern Ireland from the west on Wednesday afternoon. This will move through fairly quickly but will be heavy for a time, this falling on ground already saturated following the recent wet weather.

Be aware of further run-off and surface water flooding. The combination of rain and strong or gale force winds will also give difficult driving conditions.
